Luda,

The draft response to the Gulfco fish sampling proposal is attached. Please look it over & let me know any thoughts you may have. A couple of items - please look at the lead slope factor & reference dose & see if they look right (we normally use the lead model & not slope/reference dose for lead). Also, we are still checking most of the sediment accumulation factors (BSAF), so some of them may need to change. Finally, there wasn't any silver detected in the background samples - PBW is checking now the see if that is correct.

Thanks,

Gary Miller
